

## FlexPort

provides you with an up-to date system, able to meet the increasing requirements of

- Flexibility
- Reliability
- Efficiency
- Control

FlexPort is an ERP solution built to cater to the requirements and needs of today's international port business. FlexPort is developed in the Microsoft Dynamics AX platform and used by companies involved in the port business such as: Ports, landlord ports and terminals.

### FlexPort

The average port business typically runs several different software solutions to manage its processes. Microsoft Dynamics AX for ports offers one fully integrated all in one system automating manual processes and eliminating duplication of information from one system to another. Work flow support gives you the ability to be in control of main processes.

### Microsoft Dynamics AX

Microsoft Dynamics AX is an integrated, adaptable and scalable business management solution that helps you make business decisions with greater confidence. Microsoft Dynamics AX works like and with familiar Microsoft software, automating and streamlining business processes and connecting you with global customers, business partners and subsidiaries in a way that helps you drive business success.

### Achieve faster ROI

Because FlexPort is built on proven Microsoft products and technologies, your business can take advantage of existing IT investments and grow with future developments of Microsoft. Due to the familiar Microsoft user interface, your people have a short learning curve and easy acceptance. The integration with Microsoft SQL gives the rich possibilities of business analysis and BI reporting.
