

FlexShip

provides you with an up-to date system, able to meet the increasing requirements of

- Flexibility
- Reliability
- Efficiency
- Control

FlexShip is an ERP solution built to cater to the requirements and needs of today's shipping companies. FlexShip is developed in the Microsoft Dynamics AX platform and designed completely from an operator's perspective. The solution is suitable for all deep and/or short sea operators, either offering liner or tramp shipping or combination of both.

FlexShip

The average shipping company typically runs several different software solutions to manage its processes. Microsoft Dynamics AX for shipping companies offers one fully integrated all in one system, automating manual processes and eliminating duplication of information from one system to another. Workflow support gives you the ability to be in control of main processes.

Microsoft Dynamics AX

Microsoft Dynamics AX is an integrated, adaptable and scalable business management solution that helps you make business decisions with greater confidence. Microsoft Dynamics AX works like and with familiar Microsoft software, automating and streamlining business processes and connecting you with global customers, business partners and subsidiaries in a way that helps you drive business success.

Achieve faster ROI

Because FlexShip is built on proven Microsoft products and technologies, your business can take advantage of existing IT investments and grow with future developments of Microsoft. Due to the familiar Microsoft user interface, your people have a short learning curve and easy acceptance. The integration with Microsoft SQL gives rich possibilities of business analysis and BI reporting.
